Data Science

sanaullahtareen.info@gmail.com | +92 325-5053691 | Wah Cantt, Pakistan

SUMMARY

Data Science professional with 1 year of hands-on experience in building interactive dashboards and end-to-end Machine Learning pipelines. Proficient in Python, SQL, Tableau, Power BI, and cloud platforms (AWS, Azure). Passionate about turning raw data into actionable business insights and developing AI-driven solutions for healthcare and cybersecurity domains.

WORK EXPERIENCE

Forbidden Developers

Dec 2024 – Present

- Designed and developed interactive business dashboards using Tableau, Power BI, and Excel that transformed raw datasets into clear visual insights for stakeholders.
- Built and deployed machine learning pipelines for clients in healthcare and cybersecurity, improving data-driven decision making.

Developers Hub Cooperation

June 2025 – September 2025

- Developed strong foundation in Python programming, data structures, and algorithms.
- Gained hands-on experience in Data Visualization, Exploratory Data Analysis (EDA), Feature Engineering, and advanced reporting using Microsoft Power BI.

EDUCATION

Bachelor of Science in Data Science

October 2023 – Present

Pak Austria Fachhochschule Institute of Applied Science and Technology | Semester 6th

- CGPA: 2.95

Pre-Engineering

2021 – 2023

Scholars Science College, Wah Cantt

- Grade: A-

KEY SKILLS

- Programming & ML:** Python (Pandas, NumPy, Scikit-Learn, Matplotlib, Seaborn, Plotly, PyTorch, FastAPI)
- Databases:** SQL (MySQL), NoSQL (MongoDB)
- Data Visualization:** Tableau, Microsoft Power BI, Python Visualization Libraries
- Cloud Platforms:** AWS (Intermediate) and Microsoft Azure (Intermediate)
- Other:** Recommendation Engines, Data Analysis, Exploratory Data Analysis (EDA), Feature Engineering

PROJECTS

MediCARE - AI for Type 1 Diabetes Management | [GitHub](#)

- Developed Medicare-AI, a dual-model clinical decision support system for Type 1 Diabetes (T1D) management using deep learning and ensemble methods on real clinical data.
- Implemented LSTM neural network (TensorFlow/Keras) for time-series forecasting of blood glucose levels 30 minutes ahead using the OhioT1DM dataset.
- Built XGBoost classifier to recommend personalized insulin dosage adjustments (Increase/Decrease/Maintain) based on glucose history, carbohydrate intake, and physical activity.
